Pada sesi praktik 1 dilakukan proses awal penggunaan Git dengan membuat *repository* lokal pada komputer. Praktikan memulai dengan melakukan inisialisasi Git menggunakan perintah *Bash* `"git init"` yang berfungsi untuk membuat sistem kontrol versi pada folder proyek. Setelah itu dilakukan penambahan file menggunakan *Bash* `"git add"` dan penyimpanan perubahan pertama menggunakan *Bash* `"git commit"`. Tahapan ini bertujuan untuk memahami konsep dasar Git dalam mencatat perubahan file sebelum nantinya dikirim ke *repository* jarak jauh.

SESI PRAKTIK 2

```
kbang@INBOOK_X2 MINGW64 /d/ujicoba pbo (master)
$ git add FILEKEDUA.txt

$ git add .

kbang@INBOOK_X2 MINGW64 /d/ujicoba pbo (master)
$ git status

Changes to be committed:
  (use "git restore --staged <file>..." to unstage)
        new file:   FILEKEDUA.txt

kbang@INBOOK_X2 MINGW64 /d/ujicoba pbo (master)

Pada sesi praktik 2 dilakukan konfigurasi identitas pengguna Git agar setiap perubahan yang dibuat dapat diketahui sumbernya. Konfigurasi dilakukan menggunakan perintah *Bash* “git config --global user.name” dan “git config --global user.email”. Selain itu dilakukan pengecekan konfigurasi menggunakan *Bash* “git config -list”. Tahap ini penting karena Git membutuhkan informasi pengguna untuk memberikan identitas pada setiap *commit* yang dibuat.

Pada sesi praktik 3 dilakukan proses menghubungkan *repository* lokal dengan GitHub sebagai *remote repository*. Praktikan melakukan proses *push* menggunakan *Bash* `"git push -u origin main"` untuk mengirim file dari komputer menuju GitHub. Pada proses ini ditemukan kendala berupa masalah autentikasi dan hak akses (*permission*) yang diselesaikan dengan penggunaan *Personal Access Token* sebagai pengganti kata sandi GitHub. Setelah berhasil, file dapat tersimpan pada GitHub dan perubahan dapat dikelola melalui *repository online*.

Pada sesi praktik 4 dilakukan simulasi perubahan file dan pembaruan data pada GitHub. Praktikan melakukan perubahan isi file menggunakan editor maupun perintah Bash seperti “git add, git commit”, dan “git push” untuk memperbarui isi *repository*. Selain itu dilakukan pengecekan status menggunakan Bash “git status” untuk memastikan apakah terdapat perubahan yang belum disimpan. Hasil akhir menunjukkan bahwa perubahan berhasil dikirim ke GitHub sehingga *repository* lokal dan *repository remote* memiliki isi yang sama.
