PEMOGRAMAN BERORIENTASI OBJEK B

LINK GITHUB : <https://github.com/lhsan0449/Cobaupload>

1. View Binding

Coding

```
android {  
    ...  
    buildFeatures {  
        viewBinding true  
    }  
}
```

2. Login Activity

Coding

```
package com.example.myapplication // Sesuaikan dengan nama package Anda  
  
import android.content.Intent  
import android.os.Bundle  
import android.widget.Toast  
import androidx.appcompat.app.AppCompatActivity  
import com.example.myapplication.databinding.ActivityLoginBinding //  
Sesuaikan nama binding XML login Anda  
  
class LoginActivity : AppCompatActivity() {  
  
    private lateinit var binding: ActivityLoginBinding  
  
    override fun onCreate(savedInstanceState: Bundle?) {  
        super.onCreate(savedInstanceState)  
        // Menginisialisasi View Binding  
        binding = ActivityLoginBinding.inflate(layoutInflater)  
        setContentView(binding.root)  
  
        // Memasang Listener pada tombol Login (Halaman 9)  
        binding.btnLogin.setOnClickListener {  
            val username = binding.etUsername.text.toString().trim()  
            val password = binding.etPassword.text.toString().trim()  
  
            // 1. Validasi Input (Halaman 4)  
            if (username.isEmpty()) {  
                binding.etUsername.error = "Username tidak boleh kosong!"  
                return@setOnClickListener  
            }  
        }  
    }  
}
```

```

        if (password.isEmpty()) {
            binding.etPassword.error = "Password tidak boleh kosong!"
            return@setOnClickListener
        }

        // Contoh kredensial login sederhana
        if (username == "admin" && password == "admin123") {
            Toast.makeText(this, "Login Berhasil!",
                Toast.LENGTH_SHORT).show()

            // 2. Navigasi menggunakan Explicit Intent & Mengirimkan
            Data (Halaman 4)
            val intent = Intent(this,
                HomeActivity::class.getPermittedClass()) // atau HomeActivity::class.java
            intent.putExtra("EXTRA_USERNAME", username)
            startActivity(intent)

            // Menutup LoginActivity agar tidak bisa kembali ke halaman
            login via tombol back
            finish()
        } else {
            Toast.makeText(this, "Username atau Password salah!",
                Toast.LENGTH_SHORT).show()
        }
    }
}

// Fungsi helper penyesuaian refleksi class Java di Kotlin
private fun <T : Any> kotlin.reflect.KClass<T>.getPermittedClass():
Class<T> {
    return java
}
}

```

3. Home Activity

Coding

```

package com.example.myapplication // Sesuaikan dengan nama package Anda

import android.content.Intent
import android.os.Bundle
import android.widget.Toast
import androidx.appcompat.app.AppCompatActivity
import com.example.myapplication.databinding.ActivityLoginBinding // Sesuaikan
nama binding XML login Anda

```

```

class LoginActivity : AppCompatActivity() {

    private lateinit var binding: ActivityLoginBinding

    override fun onCreate(savedInstanceState: Bundle?) {
        super.onCreate(savedInstanceState)
        // Menginisialisasi View Binding
        binding = ActivityLoginBinding.inflate(layoutInflater)
        setContentView(binding.root)

        // Memasang Listener pada tombol Login (Halaman 9)
        binding.btnLogin.setOnClickListener {
            val username = binding.etUsername.text.toString().trim()
            val password = binding.etPassword.text.toString().trim()

            // 1. Validasi Input (Halaman 4)
            if (username.isEmpty()) {
                binding.etUsername.error = "Username tidak boleh kosong!"
                return@setOnClickListener
            }

            if (password.isEmpty()) {
                binding.etPassword.error = "Password tidak boleh kosong!"
                return@setOnClickListener
            }

            // Contoh kredensial login sederhana
            if (username == "admin" && password == "admin123") {
                Toast.makeText(this, "Login Berhasil!", Toast.LENGTH_SHORT).show()

                // 2. Navigasi menggunakan Explicit Intent & Mengirimkan Data (Halaman 4)
                val intent = Intent(this, HomeActivity::class.getPermittedClass()) // atau
                HomeActivity::class.java
                intent.putExtra("EXTRA_USERNAME", username)
                startActivity(intent)

                // Menutup LoginActivity agar tidak bisa kembali ke halaman login via tombol
                back
                finish()
            } else {
                Toast.makeText(this, "Username atau Password salah!",
                    Toast.LENGTH_SHORT).show()
            }
        }
    }

    // Fungsi helper penyesuaian refleksi class Java di Kotlin
    private fun <T : Any> kotlin.reflect.KClass<T>.getPermittedClass(): Class<T> {

```

```
        return java  
    }  
}
```
